

# Microsoft Teams

Scale, Innovate, Collaborate

Investing in Teams boosts productivity and reduces costs within your organisation. Making the move will drive Digital Transformation in your organisation, providing integrated collaboration solutions that scale, while safeguarding information and ensuring compliance.

**Adopting Microsoft Teams is a dramatic transition towards a more digitally driven workplace and will enable a significant culture change throughout your organisation.**

## What are the IT benefits?

### Compliance and Security

All unified communication services need to meet privacy and compliance requirements. Microsoft Teams is designed to meet the same security and data protection standards as Office 365 and is Office 365 Tier C compliant. The service enforces two-factor authentication, single sign on through Active Directory and encryption of data in transit and at rest. Microsoft also helps organisations protect sensitive information from being shared or leaked. Information barriers enable you to limit which team members can communicate and collaborate with each other. This ensures your communications, internally and externally, are secure and compliant.

### Governance and Control

Easily monitor and manage roles and access within Groups and Teams remotely. IT managers can actively manage all third-party integrations easily at each Teams level. There are also controls around external sharing and Cloud storage options (in addition to O365).

### Cohesion and Seamless Collaboration

Microsoft Teams provides access to threaded and persistent chat, conference and document sharing, all in a central and easy to access interface. Teams is a cohesive environment where a user has access to everything in one place at the click of a mouse. Adopting Teams will ensure that these multi-layered and complex communication layers are integrated, thereby eliminating latency and delays. This is especially vital for geographically dispersed teams, as they can now access topic-specific, multi-party discussions in an instant. Furthermore, real-time document sharing, and integrated presence information ensures your team no longer need to email documents back and forth.

### Cost Efficiencies

Today's world might be more connected than ever, but supporting global growth at pace, across multiple locations and time zones can be a costly endeavour. Teams offers unlimited audio, video and web conferencing. This reduces call costs and there is no need for costly third-party conferencing software. With the introduction of Microsoft Teams, your organisation can not only make cost savings but reduce the frustration and friction caused by employees needing to switch between platforms and increase cohesive collaboration.

## Success with Microsoft Teams

### Circle K improves meeting effectiveness by integrating applications into Teams.

The European leadership of Circle K (Global Retailer) needed a solution that would enable them to have more successful meetings. Circle K now has a solution to their meeting challenges which provides agenda creation and collaboration, meeting minutes templates, task follow-ups, and more through interoperability with Microsoft Teams, Outlook, OneNote, Word, Planner, Excel, and SharePoint.

### Newcastle University implements Microsoft Teams to maintain compliance

Students at Newcastle University had been sourcing their own collaboration tools or free commercial apps on the internet without any IT oversight or control, this was causing the university compliant issues with GDPR. NU drove the adoption of MS Teams across 35,000 users including staff, students, and contractors. What might have taken 10 emails can now be settled at a glance.

### University of Burgundy helps students and lectures stay organised and connected.

University of Burgundy implements Microsoft Teams for 5,000 students across multiple locations and hardware. The students interact, plan their tasks and meetings, exchange files, and organise votes, students are completely autonomous. Lecturers at the university use Teams to stay organised and connected while leveraging other applications that have been integrated into Teams like Asana a very popular project management tool.

### NTT Communications leverage for all file sharing, communication and collaboration

NTT Communications a global IT services company delivering network services in over 190 countries, the company was using on-premises Microsoft Exchange for email, a file server for collaborative file work, Cisco Jabber for chat, Cisco WebEx for video conferencing, to simplify this NTT Communications implemented Microsoft Teams as the new company communication platform.

## About Auxilion

As an award-winning Microsoft Gold partner, we deploy Microsoft technologies that improve agility and deliver growth for our clients. Through our ISO accredited and ITIL standard led service operations centres in Dublin and Sheffield, Auxilion delivers technology support to our clients 24/7, 365 days a year, so no matter where your people work, Auxilion is there to support them.

As one of Ireland's leading Microsoft Gold partners, we pride ourselves on our ability to dig into your business and get to the heart of what drives Digital Transformation. Our Discovery cover strategy, planning and implementation guidance.
